

DATASHEET

ZSCALER DATA LOSS PREVENTION

Integrated loss protection across web, email and mobile

OVERVIEW

Zscaler Integrates DLP across Web, Email, and Mobile Security, creating a protected border around your confidential data. Webmail, social networking, instant messaging, and blogs are firmly established in corporate networks, and your private business data has never been at greater risk of loss.

Zscaler DLP leverages the world’s largest global security cloud to secure your corporate information and IP. Thanks to a unique architecture that scans all outbound traffic from any device or location, Zscaler DLP protects against data loss from smartphones, tablets, and laptops—all with a single, global policy.

BENEFITS

Gap-Free Prevention

- Stop data loss from road warriors across every device and every network, with a single cloud policy
- Inline enforcement inspects and protects both clear and encrypted content, not just passive detection and reporting
- Inspect and control content across web and email, with an integrated, seamless policy

Compliance and Real-Time Reporting

- Helps meet regulatory and industry compliance—HIPAA, PCI, FISMA, etc.
- View any transaction, by any user, from any location in seconds
- Prevent loss of credit card numbers, sales data, source code, SSN, and more with built in, customizable policy

Simplicity and Efficiency

- Deploy and prevent loss in hours, not months
- Pre-configured policies allow for immediate protection, while custom policy provides unrivaled flexibility
- Free up your IT resources to focus on other projects

Cost Savings

- No appliances, software or clients to deploy and manage
- Just pay as you go—no patching, no updates and no backhauling
- No buying excess capacity—cloud scales as you need capacity

Integrated Policy.
Simple Administration.
Total Control.

- ➔ Stop data loss across all users, devices and locations with a single policy
- ➔ Ensure compliance and protect against liability with predefined, as well as custom policy and real-time reporting
- ➔ Deploy and manage comprehensive cloud-delivered DLP in hours, not months

Zscaler integrates web, email, and mobile security—one policy, one console, and one global security platform. Ensure gap-free protection against advanced threats, 0-day attacks, and data theft with one seamless solution.

DATASHEET

ZSCALER DATA LOSS PREVENTION

Global Cloud Coverage

- World's largest web security cloud—keep your data safe, regardless of user location or network
- Five 9s availability—local, regional and multi-continent redundancy
- Near-zero latency

Mobile Device Data Security

- Add compliance to mobile devices—including iPads, iPhones and tablets
- Secure data on any device, anywhere—without the need to deploy endpoint agents
- Enforce a single, consistent user policy across all PCs and mobile devices

FEATURES

DLP

Zscaler scans all data leaving your organization—including web traffic and email message body and

attachments. Zscaler's real-time data security engines leverage multiple DLP Dictionaries to scan content, documents, PDFs or compressed archives for potential data loss. Through granular rules based on user, group or domain, Zscaler DLP detects and blocks the loss of sensitive data, including Credit Cards, SSNs, financial statements, medical documents, source code and other intellectual property.

Unified Policy and Reporting

To ensure compliance, Zscaler delivers a single, unified console to create and report on DLP policy across all users and locations, even mobile users and devices. Administrators manage their own policy—with changes instantly reflected across the entire cloud. And, Zscaler's advanced NanoLog™ technology ensures administrators can view any compliance issue, by any user, from any location—instantly.

DLP AT-A-GLANCE

Global Cloud Platform

Prevent data loss from HQ, remote offices, laptops, smartphones. Full SSL inspection to scan all outbound content.

Real-Time Reporting

Report on any compliance transaction, from any location, in seconds.

Web 2.0 Scanning

Prevent data loss across Web 2.0 applications, social networking, webmail and web-based IM.

Full Payload Inspection

Inline scanning to log or block transactions with confidential data. Inspect Office, Adobe, zipped files and more.

Day-1 Deployment

Start protecting your data immediately, with predefined engines and dictionaries ensure compliance on day-1.

Integrated Loss Prevention

Single policy scans across web and email traffic. Single console for administration and reporting. Seamless integration into Web, email and mobile security policy.
